

REGIONAL STRATIGRAPHY & FIELD ARCHITECTURE

The Upper Assam Shelf Basin contains seven major oil and gas fields operated by Oil India Limited: Duliajan, Digboi, Naharkatiya, Moran, Rudrasagar, Jorhat, and Sibsagar. The Tertiary sedimentary column spans from surface Tipam Sandstones down to the Basal Sandstone above Precambrian basement rock.

Field Name	Basin Region	Key Reservoir Formations	Primary Operational Hazards
Duliajan Field	Upper Assam Shelf	Barail Sand, Girujan, Tipam	Reactive Shale Swelling, Gas Kick
Digboi Field	Upper Assam Shelf	Tipam Sandstone, Digboi Surface	High Friction, Shallow Gas Drift
Naharkatiya Field	Upper Assam Shelf	Barail Group, Kopili Shale	Pack-off, Differential Sticking
Moran Field	Upper Assam Shelf	Barail & Sylhet Formations	Lost Circulation, Tight Hole
Rudrasagar Field	Upper Assam Shelf	Barail Main Pay, Kopili	High Pore Pressure Transition
Jorhat & Sibsagar	Upper Assam Shelf	Tipam & Barail Group	Hole Washout, Clay Dispersion
